PRODUCT: CSG Sealer

Characteristics:

Chemical Family,	Water based modified acrylic
Physical Form,	Liquid
Color,	Milky white
Odor,	Slight
Solubility,	Miscible in Water
Volatile Organic Compounds,	<5%

General Description:

CSG Sealer is a modified acrylic sealer yielding high reflectivity. The topical coating is suitable for protecting concrete and natural or synthetic stone surfaces against oil and food staining. It is UV stable and therefore applicable on both exterior as well as interior surfaces. **CSG Sealer** is highly effective at preventing acid staining on all stone and concrete surfaces even keeping acidic fumes from the surface to which it is applied.

CSG Sealer will darken the color of natural stone and clay pavers. Always test in an inconspicuous spot prior to applying to a large area.

Application:

CSG Sealer can be applied with a mop, sponge or micro fiber applicator being careful to apply an even uniform coat without puddling or pooling. Make sure surface is completely dry prior to application and allow 24 hours of drying time prior to heavy foot traffic. One gallon will cover 300 – 600 square feet.
